On June 14, 2000, the CDC and representatives of the vaccine industry met to address a joint problem.

They had just discovered that they had poisoned a generation, and now they had to figure out how to cover their tracks.

Whether they get away with it or not depends on you. Share this film widely.

It is the most important and informative film on mercury poisoning, and it applies to everyone, not just autistic kids.

Mercury poisoning predisposes people to diabetes, heart disease, depression, and a host of other mental illnesses.

Here's everything you need to know:

1. Thimerosal was known to be toxic as far back as the 1930s.
2. It's an ineffective preservative.
3. Despite these two facts, the CDC used, and continues to use, it in vaccines.
