

**FAST-TRACK YOUR  
RESEARCH EFFECTIVE  
SUCCESSFULLY WITH  
TARGETED DISCOVERY  
ARRAYS**

## **DRUG DISCOVERY**

Our custom molecular and therapeutic targeted arrays have proven effective on hard-to-hit targets, offering new solutions where traditional approaches have failed. We offer full hit-to-lead follow up services.

## CROP PROTECTION

Naturally evolved peptides are proving effective against insect pests as well as other pest organisms, offering alternatives to traditional approaches

MORE INFORMATION

### WHY ARE VENOMS USEFUL DISCOVERY?

*Animal venoms have not evolved to cure our targets that venoms have evolved to hit in the evolved in humans and are highly conserved. Na<sup>+</sup> ion channel vital for insect life has also evolved but is involved in pain transmission. A venom that kills insects can therefore have potential as a therapy for treating pain in humans. Many venoms have evolved to kill prey that are desirable for treating specific diseases. Venoms that lower blood pressure will have potential for treating hypertension.*
